SAIL

CONSTRUCTION

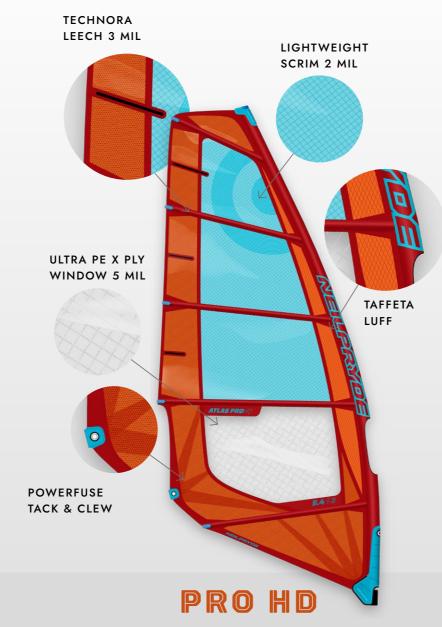

Our most premium construction

Lightest and most direct feeling in the hands

Best visibility on the wave

FEATURED IN:

COMBAT PRO
ATLAS PRO
WIZARD PRO (DACRON LUFF)

HD Version of our most premium construction

Our lightest wave sail construction

Slightly softer in the hands and less direct than Pro

FEATURED IN:

COMBAT PRO HD

ATLAS PRO HD

WIZARD PRO HD (DACRON LUFF)

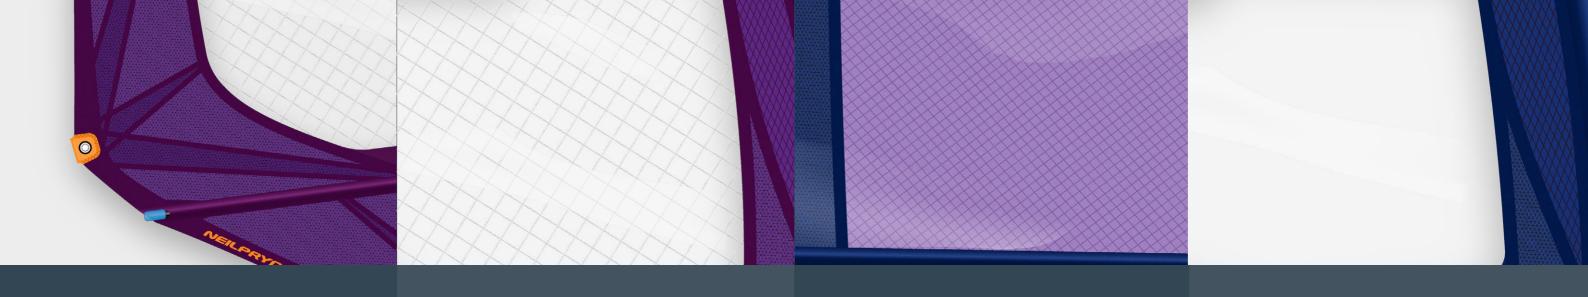

Our strongest wave sail construction

Our most affordable wave sail construction

Slightly softer feel and heavier than Pro

FEATURED IN:

COMBAT HD
ATLAS HD

RADIAL HD

materials at high load points (clew and tack) and variable thickness strength to weight advantages found in Powerfuse to this less expensive, stitched construction.

FEATURED IN HD CONSTRUCTION

ULTRA-PE

window panel for added durability. This Ultra-PE laminate is and HD feel slightly softer compared to Pro construction. Also the total weight is slightly lighter.

FEATURED IN HD & PRO HD CONSTRUCTION

LIGHTWEIGHT SCRIM

Centre upper panels use LIGHTWEIGHT SCRIM laminate to minimize weight while providing outstanding rip-resistance due to the high yarn density of this material.

FEATURED IN PRO & PRO HD CONSTRUCTION

ULTRA CLEAR

optimum visibility on the wave and the most for ultimate control.

FEATURED IN PRO CONSTRUCTION

BATTEN TENSIONER

All battens come with integrated batten tensioners to precisely tune and set the batten tension without the need of tools. Easy to open and adjusting batten tension.

FEATURED IN PRO, PRO HD & HD CONSTRUCTION

POWERFUSE

POWERFUSE tack and clew panels are made from fully laminated, overlapping yarns which radiate from points of high loads. Our unique radial construction creates variable thickness panels which gradually thin out towards the centre of the sail to reduce weight and distribute loads while eliminating stretch and deformation.

FEATURED IN PRO & PRO HD CONSTRUCTION

TAFFETA LUFF

Rip-stop TAFFETA X-Ply laminate luff panel combines excellent stitch holding properties softer and more forgiving than regular X-Ply

FEATURED IN PRO & PRO HD CONSTRUCTION

TECHNORA

TECHNORA fibres strategically placed in the leech panels to control stretch and stabilize the shape of the sail.

FEATURED IN PRO & PRO HD CONSTRUCTION

ZONE PRO HD

PURE WAVE

The lightest, fastest, most effortless pure wave riding experience available. Extremely fast and neutral on the wave, the Zone will allow you to concentrate 100% on your rail work and maneuvers. Built to handle the biggest waves on earth, you will hit sections of the wave you have never imagined possible glide through moves with ease. Pure wave riding at its best.

COMBAT PRO HD

LIGHTEST WEIGHT. ULTIMATE STRENGTH.

Our World Cup Team Riders' sail of choice. Combat Series is the epitome of wave sail development. Power when you need it, neutral on the wave and built to withstand everything Mother Nature can throw at you. Pro HD construction combines the Pro features of the Combat Pro with an X-Ply centre window for an even more bullet-proof sail. This results in a lighter sail and a slightly softer feeling than the Pro construction.

ATLAS PRO

POWER WAVE - RESPONSIVE & LIGHT

Superb early planning combined with controllable power, stability, upwind performance and high wind control make this a favourite sail for onshore conditions and / or heavier sailors. 5 battens for ultimate performance. Atlas will allow you to blast over whitewater and jump higher than ever while still feeling soft enough to perform well on the waves when conditions allow.

WIZARD PRO

FREESTYLE

Developed and refined by our dedicated, professional windsurf team alongside Robert Stroj, the Wizard is our pure, no-compromise freestyle sail. Power when you need it, incredibly neutral when you want it to be and with pop that will blow your mind, the Wizard has everything you need to help you through slide through your first spock all the way to perfecting double power moves.

FUSION HD

TOP CLASS FREEMOVE

Sitting right between the Atlas and Ryde in our range, the Fusion offers excellent bump and jump performance for sailors looking for more power and flat-water performance than a dedicated wave sail but still enough maneuverability to be able to throw forward loops, back loops and gentle wave rides. Light and stable, the Fusion is also a quick nocam freeride sail when paired with a faster freeride board.

RYDE

12

FREERIDE - RESPONSIVE & LIGHT

Our most user-friendly and affordable freeride sail. The Ryde offers fun windsurfing in its purest form. Quick to rig and light in the hands, it is a stable, smooth sail designed to build confidence in gybes, waterstarts and straight-line speed. Equally comfortable on fin or foil, the wide wind range and range of use will allow you to enjoy every session right from the word go.

SPEEDSTER

NO CAM FREERIDE SPORT

Slalom racing speed without the cams. Since its inception Speedster has always been a favourite no-cam, high performance freeride sail all around the world. It's outline is based on our RS:Racing slalom sails and it features medium-strong luff curve for stability and maximum wind range. Easier to rig, waterstart and jibe than a pure slalom sail but almost as fast, you will leave your friends in their tracks.

V8

TWIN CAM FREERIDE

Race sail performance without the encumberments of a pure slalom sail. 2 cams and a narrower luff sleeve make the V8 easier to rig, gybe and waterstart than a pure race sail. Don't let the ease of use fool you though, V8 can hold its own around a race course and boasts even better early planning than even the most advanced slalom sails. Perfectly suited for foil or fin.

FREE FLIGHT

EASY HANDLING & MANEUVERABILITY

Our first dedicated foil freeride sail. Ultra-light weight, early flying. Optimum efficiency to get the most out of every foil session, allowing you to use the smallest sail possible. 4 battens and 1 mini cam (2 on the 6.6) make for the lightest possible feeling while maintaining stability. A short boom and tight leech get you flying as early as possible and feeling weightless over the foil.

V8 FLIGHT

SPEED & CONTROLLABILITY

Our dedicated foil free-race sail. Combining the ultimate foiling technology of our Flight EVO range with the ease of use of the V8, V8 Flight is the ultimate high performance free-race foil sail. Super-fast and stable, 4 sizes from 5m to 8m will give you the ability to outfly your friends in anything from 6-25 knots. A favourite sail in personal guivers and windsurf centres across the world.

DRAGONFLY HD KIDS

YOUTH PERFORMANCE

Styled and designed with the same attention to detail as our pro wave sails, Dragonfly is the ultimate youth sail. No expense has been spared in the design of this sail and it shows on the faces of the kids who try it for the first time. Super light-weight but durable design for ultimate ease of use and maneuverability, Dragonfly gives young rippers everything they need to achieve their goals!

RS: RACING EVO XIV

FOILING/RACE

Completely redesigned for 2023, our most technologically advanced Slalom sail ever. Designed from the ground up with our new state-of-the-art 3D design software. Entire sail is modeled in 3D in its actual flying shape with twist and luff curve accounted for. Our quadruple luff panel allows us to align panels with the highest loads. Full carbon battens above the boom offer ultimate performance and weight.

carry the transverse

loads to minimize canopy distortion and stretch.

Allows higher aspect ratios and increases performance.

DIHEDRAL FRONT PROFILE

MODIFIED DELTA **PLATFORM**

LE shape and an elliptical spanwise lift distribution for better upwind

Creates a more efficient

performance and control.

OUR UNIQUE HANDLE

DROP GRIP FRONT HANDLE

The vertical section on the forward handle is ideal for flagging and waveriding due to improved roll control over conventional flagging handles.

CALIBRATED HANDLE POSITIONS

The handles are equidistant from the center of effort on each wingsize for effortless balanced flight. The larger wings feature longer handles to give the rider hand position options to maximize power or reduce fatigue.

ERGONOMIC HANDLE DESIGN

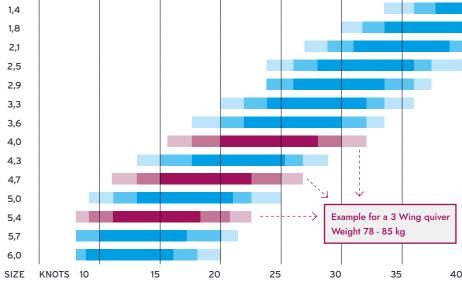

The handle bases integrate seamlessly into the strut, while the arc of the handle plane reduces fatigue and positions the wing at the optimum flight angle.

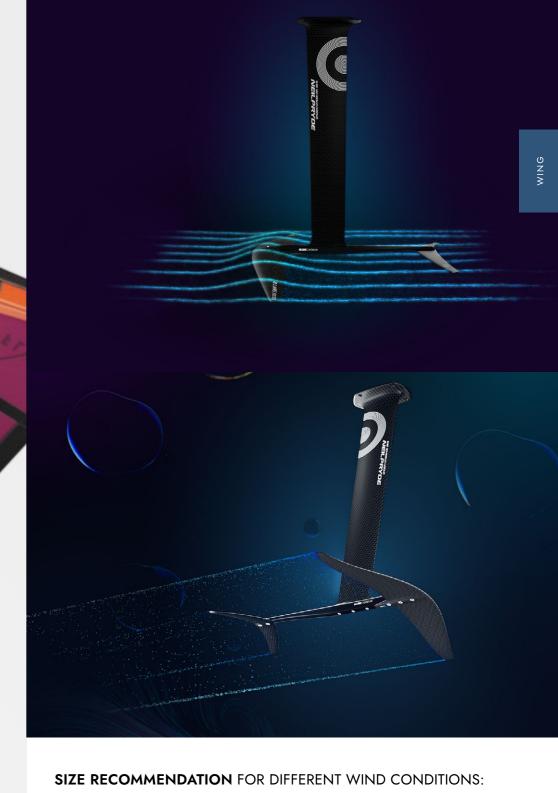

RIGID TUBULAR **HANDLES**

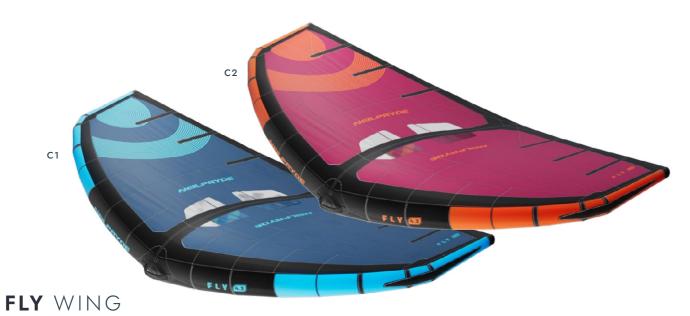

Add amazing roll control and

comfort while providing the perfect structure to add a harness line.

1,4

CATCH THE FLY

We know we'll never outrun evolution. However, the NeilPryde ethos has always been committed to the best engineering humanly possible. To performance, innovation and top quality, long lasting products. After 2 years of development, we're confident that we've pushed the boundaries of what's possible again with the first NeilPryde Wing. The development of the FLY has been based on using the most proven materials, examining the technical development of wingfoiling down to the smallest detail and adjusting all the set screws. With Nils Rosenblad - former NeilPryde sail designer and Americas Cup foil engineer - and our entire design team dedicated to this project, the first NeilPryde wing introduces several unique features and innovations.

The whole is greater than the sum of its parts and many of these small technical innovations, not at all visible at first glance, that make the difference here. Born from the unconditional view of the Wing from the perspective of an engineer, sailmaker, and flow expert. It was clear from the beginning that we didn't want to look at a Wing as a kite without lines, but had to adapt all design features to the specific requirements of a high performance Wing.

6,0	7,5	8	3710	2220	2,29	3,242	130040	1.199,00

The 3D shape of the canopy leading edge is defined by a series of transverse panels that converge at the wingtips. This leverages the LE Tube structure to maximize tension in the critical entry sections – the result is more lift and a higher stall angle for better acceleration in light winds, and the ability to fly efficiently at low angles of attack for better control and higher top speeds in strong winds.

WEIGHTS ON LE

The use of an ultra-light, high-tenacity woven polyester at the wingtips and back of strut results in a very light 'feel' due to reduced swing weight. This improves overall performance and makes the wing even more stable.

VENTED STRUT

The large opening between the LE and the front of the fill panel (which connects the canopy to the strut) allows the pressure to equalize across the two sides of the wing. This improves overall performance and makes the wing even more stable.

INTEGRAL BATTEN SYSTEM

Sewn-in composite battens create a flat, fast trailing edge with minimum flutter.

TPX 100 SDM RDM

100 % carbon prepreg construction using special Torq-Preg construction in the base of the mast. This unique prepreg material features +/- 45 degree fiber orient ation. This helps to control torsion, particularly in the boom area. This construction results in an extremely light weight mast with very fast response

SPX 70 SDM|RDM

Our 70% carbon masts are offering the greatest value with the latest prepreg technologies in its product category. Thanks to the added fiberglass prepreg layers in the lamination process this mast is virtually indestructible! The use of fiberglass results in considerably thicker wall thickness making it immune to ovalization under compression as well as very resistant to impact damage. In weight it is very close to the previous FLX70 range.

X-C WAVE STD | SLIM

Our ultimate monocoque carbon pre-preg wave boom is designed for expert riders who demand knife-like precision from their equipment. This boom offers instantaneous control with its increased torsional rigidity and square profile tail end. Allowing zero lag time from flexing connections. Giving the cosiest sensation you have ever felt while holding a boom.

The XC Slim boom provides you with the ultimate direct steering experience. Thinner and lighter compared to the other carbon booms, the XC Slim is made for riders who prefer that feeling of incredible lightweight in their hands. It features the same astonishing characteristics without noticeably compromising on stiffness. The new size of 150 - 200 is a state of the art all-round boom that satisfies the need of almost every rider.

YENTEL CAERS WON THE
FIRST EVER FOIL STYLE WINDSURF FOILING EVENT
ON THE GLIDE SWIFT AT FPT VIESTE!

- I was using the new Swift foil in Vieste, the 800. I put a bigger tail wing to compensate for the short fuselage. It is the best foil I have ever tried for winging and foil style windsurfing!
 - YENTEL CAERS

GLIDE WIND HP

DEEP TUTTLE BOX | POWERBOX | SURF PLATE

The Glide Wind HP is ideal for windsurfing as it is a friendly, easy-cruising and carving foil, also suitable for wave riding and basic freestyle moves. The Glide Wind HP is the perfect tool to get you into the fascination of foiling. The lowest possible speed is required to take-off allowing first-time foilers to feel safe and comfortable. This all-round foil focuses on extreme stability and early flying. However, through the newly developed thin profile of the front wings, the Glide Foils still achieve remarkable speed and excellent maneuverability.

GLIDE SURF HP

DEEP TUTTLE BOX | POWERBOX | SURF PLATE

The Glide Surf HP creates a playground for building new surfing sensations! With a stable and fast take-off no matter the surf conditions, the Glide Surf HP delivers superior gliding and controlled speed to ride waves as far as they can flow. Through the sophistically developed design of the front wing, the Glide Foil HI range reaches an incredible top speed and maintains great maneuverability. On the wave, the Glide Surf allows you to fly through the sections and progress from straight riding to progressive foil-turns.

GLIDE SWIFT CARBON

SURF PLATE

Experience the ultimate freedom on the water with the brand-new Glide Swift Carbon - the perfect all-round foil for winging!

The innovative rounded delta middle section and unique high aspect wings provide early, and easy lift combined with maximum glide performance and speed. The Glide Swift Carbon is the perfect choice for EVERYONE, from beginners to experts. It is easy to control and offers a very early take-off even without perfect pumping technique.

GLIDE SURF CARBON HP

SURF PLATE

The Glide Surf Carbon HP is the ideal foil for every wingfoil pro out there there who accepts no limits and wants to push for the maximum during their session. In addition to the super stiff carbon mast, the redesigned connection between mast and fuselage guarantees high speeds and the most direct steering feel.

FOIL COMPONENTS GLIDE SYSTEM

1. INTERCHANGEABLE HEAD -

CNC reinforced base construction. Two deep titanium vertical tube connections to the mast for maximum strength, eliminating movement and offering perfect load transfer. Avoids vibration around the upper attachment area.

Choose your base system depending on your sport.

Comes with all screws which you need to connect the head to foil and board.

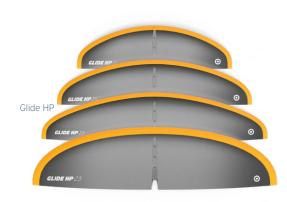

MODEL CODE	SRP €*
Deep Tuttle Box 110110	199,00
Powerbox 110111	219,00
Surf Plate 110112	239,00

2. FRONT WINGS -

Glide HP

GLIDE wings are made of pre-preg carbon layup with inner foam construction for maximum durability to weight ratio. This setup creates a natural tendency to roll into turns maintaining a nice balance during your ride. Through the sophistically developed design of the front wing, the Glide Foil HP range reaches an incredible top speed and maintains great maneuverability. On the wave, the Glide Surf allows you to fly through the sections and progress from straight riding to progressive foil-turns.

SIZE	MODEL	CODE	SRP €*

23	Glide HP FW	120205-000	599,00

44

Glide Swift

The carbon front wing, which features an inflected leading edge with outer high-aspect sections and a moderate center sweep, maximizes agility and helps to control hard turns. The low-drag wingtips reduce drag and decrease the risk of injury.

SIZE	MODEL	CODE	SRP €*
6	Glid Swift FW	120246-000	449,00
8	Glid Swift FW	120246-000	479,00

12	Glid Swift FW	120246-000	529,00
14	Glid Swift FW	120246-000	549,00

3. TAIL WINGS -

Glide HP: GLIDE wings are made of pre-preg carbon layup with inner foam construction for maximum durability to weight ratio. This setup creates a natural tendency to roll into turns maintaining a nice balance during your ride.

Glide Swift: The tail is a swept wing design with turned up wing tips. It's optimized for a balance between speed, stability and turning. In terms of stability it punches above its weight for the area due to the sweep. At the same time, it offers extremely responsive yet forgiving turning.

SIZE	MODEL	CODE	SRP €*
2	Glide HP Tail Wing	120251-000	199,00
2,5	Glide HP Tail Wing	120251-000	249,00

FLIGHT FR

PERFORMANCE FREERIDE FOILING

The Flight FR is the latest evolution of our accessible high-performance freeride foil range for real world sailors. It is less intimidating than full carbon foils and still delivers exceptional speed in a wide wind range. Compatible with high performance freeride, and pure specialized foil boards, the FLIGHT FR not only offers great lift, stability and control, but is even faster than many other full carbon foils in the market. Our riders have expressed that this is the most fun windsurfing foil in the range and our freestylers have even been choosing this over any other foil for freestyle foiling. Truly an all-round foil for everyone.

MISSION 5/4 FZ HOODED

STRETCH YOUR LIMITS

The Neilpryde Mission - to help cool people stay hot and flexible. The new Mission combines the impossible superflex with high thermal insulation. Outstanding warmth meets freedom of movement without compromises. The Mission achieves its flexibility by consisting of the most flexible outer lining available combined with soft neoprene. Additionally the new, super stretchy thermal warming insulation Hotcell 3GN is applied from the shoulders down to the knees. Like this, the flex of the new Mission could be increased by 10 - 15% compared to the previous Mission.

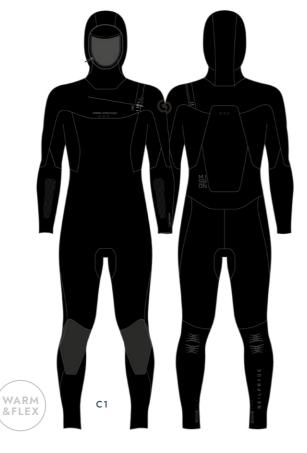

MATERIAL:

Limestone Neoprene, HotCell 3GN, Unlimited flex, Agua Glue (water based)

KEY FEATURES

- » Integrated Neo Hood
- » Glued and Blindstiched GBS Seams
- » Griplock Wrists
- » YKK Zipper
- » Detachable Ankle Cinches
- » SCS Neck Seal
- » Quick Zip System

- » Drainages at lower leg, front and back panel
- » Deboss Knee Flex Panel
- » EFX Expansion Panel
- » Key loop
- » Kneepads: highly durable, abrasion resistant 4-way strech material

MISSION 5/4 BZ

STRETCH YOUR LIMITS

The Neilpryde Mission - to help cool people stay hot and flexible. The new Mission combines the impossible superflex with high thermal insulation. Outstanding warmth meets freedom of movement without compromises. The Mission achieves its flexibility by consisting of the most flexible outer lining available combined with soft neoprene. Additionally the new, super stretchy thermal warming insulation Hotcell 3GN is applied from the shoulders down to the knees. Like this, the flex of the new Mission could be increased by 10 - 15% compared to the previous Mission.

NEILPRYDE _____

MATERIAL:

Limestone Neoprene, HotCell 3GN, Unlimited flex, Agua Glue (water based)

KEY FEATURES

- » Glued and Blindstiched GBS Seams
- » Griplock Wrists
- » YKK Zipper
- » Detachable Ankle Cinches
- » SCS Neck Seal
- » Quick Zip System

- » Drainages at lower leg, front and back panel
- » Deboss Knee Flex Panel
- » EFX Expansion Panel
- » Key loop
- » Kneepads: highly durable, abrasion resistant 4-way strech material

WIZARD FZ

YOUR 2ND SKIN FEELING

This suit is your second skin. Made for high-performance action and built with the lightest and most flexible materials available. The goal was to build the most flexible suit in our range and to set a new benchmark. The 2nd skin feeling will enhance your performance on the water - the perfect tool for all watersports. The focus is on flexibility and comfort: the most stretchy outer and inner linings available are combined with soft Limestone neoprene all over the body. The new Fireline pro insulation is used in the most important areas to guarantee thermal protection.

MATERIAL:

Limestone Neoprene, Fireline Pro, Unlimited flex, Aqua Glue (water based)

PROTON

FLEXIBLE, FLYWEIGHT SHELL HARNESS

Stand out on the water. We removed the stiff core typically found in a shell harness and replaced it with tough and lightweight Surlyn® material developed by science geeks at duPont in order to retain most of the benefits of a hard shell while improving flex in places riders need it most. This low profile harness can be used for both kiteboarding and windsurfing, in freestyle, wave or freeride disciplines.

- » Ultra lightweight durable composite shell core
- » Low Profile design allows full range of movement
- » Weightless natural feeling
- » Compatible with the fireball system
- » Fusion composite core that adapts to the shape of your back over time
- » Harness doesn't ride up, locking itself in place

ULTIMATE WAVE PRO

IP'S MOST RADICAL DOWN-THE-LINE WAVE BOARD

This board feels at home at every wave spot in any given conditions. The board carves fast, turns smoothly and maintains speed anywhere from huge down-the-line waves to mushy onshore rollers. It responds instantly to rider input and changes from rail to rail comfortably and extremely quickly. The grip and rail bite will give you the confidence to push your personal limits when carving turns on anything from medium to XXL waves. It will reward progressive sailing with turns that you used to only dream about. This is the ultimate wave board! The shape and the features of the board remain unchanged. Double foot-strap holes satisfy the request of many of our customers and pro riders and completely eliminate any chance of the straps twisting. The thick deck-pad increases comfort and cushions the landing of big jumps and aerials.

MAGIC WAVE PRO

HIGH-PERFORMANCE ALL-ROUND WAVE BOARD

JP's greatest all-round wave design - ever! This concept combines the benefits of all previous JP wave all-rounders and outperforms them all. Performing at its best in onshore jumping and wave riding, the Magic Wave jumps higher and rides small to medium sized waves better than the Ultimate Wave but it doesn't stop there. It offers both: Great front and back foot wave riding and holds its own in far bigger waves than you would expect, meaning that you can really choose 1 board for 90% of conditions and will almost never be under-gunned in big surf or lacking performance in small surf. The thruster fin setup supports the board's all-round nature: the tail fin features a traditional outline with sufficient area in the tip for ease and control. For power, early planing and speed all thruster fin come in Carbon material. Get out and try yourself. Feel the MAGIC!

FREESTYLE WAVE PRO

IP'S FASTEST & MOST-MANEUVERABLE ALL-WATER TOY

They do it all! These shapes are great overall – confirmed by magazine tests and feedback of the average rider: everybody loves this generation of Freestyle Waves! They are super comfortable and effortless to sail, provide quick response and great manoeuvrability: Hasslefree medium to high wind freeriding, bump and jump blasting, classic freestyle, high speed carving, wave sailing..... You name it and the Freestyle Waves have it in their bag. Still as all-round as ever, they are JP's fastest and most manoeuvrable all-water toys. They are livelier and more versatile, too.

The PRO edition features JP Freestyle's proven Carbon Innegra layup and comes with a Foil-Powerbox

FREESTYLE PRO

FULL-ON FREESTYLE CONTEST BOARDS

Four state of the art Freestyle designs in a modern, compact short board shape. Their awesome handling inspires the JP team riders to come up with new moves and a more radical style of sailing all the time. The lively boards are quick to plane with rapid acceleration and these sprint qualities are the prerequisite to perform in the small, limited competition areas. They jump very well which helps to pull-off all the big stunts and double moves. Furthermore, the Foil-Powerbox widens the range of use. Awesome boards to show your style!

MAGIC RIDE LXT

IMPROVED MAGIC

Stunning boards which do everything you'd expect from a freeride board - and they do it exceptionally well and exceptionally easily! They sit high on the water, delivering the lively and sporty feel which makes windsurfing so exciting. They plane early, are fast, yet super easy to sail and control. Their gybing potential impresses riders of all levels: Easily and willingly they carve into and through turns: JP's most playful and manoeuvre-oriented freeride boards. The magic of these boards pushes the performance and fun factor to the next level. If it's about freeriding, then this is the MAGIC!

The LXT features sustainable materials like Paulownia wood for reinforcements in the bottom and comes with various reinforcements, stringers, the Parabolic Rail band, a Quadraxial fibre construction in the full standing area angra nose reinvorcement. It comes with a G10 fin and JP's Foil-Powerbox.

SUPER RIDE LXT

SPORTY FREERIDE

Positioned right in the centre of the popular freeride class, all these boards are simply great all-rounders. With these shapes every rider can reach high speeds easily, even when not fully powered. Additionally, the boards have control in abundance, hence, they ignore chop and their performance seems to have no limits when the conditions get rough. Hassle-free freeride performance for everybody: They are fun to sail and a treat to gybe. What they provide simply is a Super Ride!

The LXT features sustainable materials like Paulownia wood for reinforcements in the bottom and comes with various reinforcements, stringers, the Parabolic Rail band, a Quadraxial fibre construction in the full standing area angra nose reinvorcement. It comes with a G10 fin and JP's Foil-Powerbox.

SUPER SPORT LXT

FASTEST CRUISING SPEED

Sticking to their proven formula of offering easy handling at incredible speed, these freerace shapes are super comfortable and easy to sail. They release early, accelerate incredibly fast and fly freely over flatwater and chop alike. The comfortable stance will give you the confidence to push the boards and go as fast as possible. Due to their outstanding control, recreational sailors reach higher top speeds than on more demanding World Cup Slalom boards. It is now much easier to rail-up and carve powerful and dynamic gybes. Overall, they are JP's fastest and most enjoyable free-race boards!

SUPER LIGHTWIND LXT

NO WIND FORCE

This board is famous for super early planing and powerful performance in light winds. And in its brand new shape, the generation 5 benefits from a longer, stretched outline that improves all core characteristics: early planing, speed, control and maneuverability, resulting in an overall better board! In addition, it became more lively and now provides an electrifying sensation! Since some shape details also derived from the HydroFoil boards, the SLW's foil characteristics also improved. Better try the board to find out how much fun you can have in almost no wind.

'INDSURF BOARDS

FREAK FOIL PRO

FULL-ON MANOEUVRE & FREESTYLE FOIL BOARD

THE board for riders who accept no limits: no matter if you want to do your wild moves with rig or wing, there are plugs for your ideal foot strap position. Super short and compact, the short board comes with a noticeably low swing weight, making rotations effortless and fast. Getting into flying mode comes naturally and allows spectacular moves already in light winds. At the same time you can keep foiling even when the conditions get rough. Water time will increase for every rider. This PRO edition features JP's proven Carbon Innegra layup, long track boxes and a carrying handle in the bottom as well as double footstrap plugs.

The Freak Foil is additionally working very well as windfoiling option for kids. With the front foostraps in windsurf position and the back straps in wing position, the stance is shortened and perfectly adapted to the proportions of our smaller foiling pros.

SPEED PRO

RACING: SPEED

There is nothing like the feeling of flying down a speed course totally maxed-out and being right on the edge. They are designed and developed for those who have the guts to sheet in – no matter what. Rocket-like acceleration, super loose feel and almost unlimited top speed. Take the biggest sail you can possibly hold, sheet in and experience the feeling of flying down a speed course – totally maxed out and right on the edge. Hans Kreisel proved with the JP Speed 45 that these boards can handle and control speeds up to 100 km/h and more which inspires confidence when the fear level might take over. They are designed and developed for those who have the guts to constantly push their limits.

SLALOM PRO

RACING: SLALOM

Control and top speed - that's what it is all about when you want to be on the podium. The 62.5, 72 and 85 are designed for blasting at PWA competition speed. Also, lighter riders will remain in control even when fully overpowered enabling them to get up to top speed. The 85 provides great planing power in light conditions. And the smallest 55 has proven its qualities on speed slalom tracks like the Defi Wind.

HYDROFOIL LXT

FOIL FLYING

JP's HydroFoils were one of the very first specialised boards for foiling and they were trendsetters right from the start of the foil revolution. Their overall range of use and the all-round appeal always made them extremely popular and successful on the market. These two, third generation shapes reflect a downsized, freeride / freerace version of the high-performance models. They are easier to access, to control and to fly making them more efficient and faster overall. They represent JP's most balanced mix of user-friendliness combined with top foil performance.

The LXT features sustainable materials like Paulownia wood for reinforcements in the bottom and comes with various reinforcements, stringers, the Parabolic Rail band, a Quadraxial fibre construction in the full standing area angra nose reinvorcement. It comes with a G10 fin and JP's Foil-Powerbox.

HYDROFOIL SL PRO

HYDROFOIL SLALOM

Foils dominate the slalom discipline and the gear gets faster and faster. New sails are developed, faster foils show up and the boards not only have to keep up with this development, but also be part of the progress. This is why JP's fastest foil board now comes with four smaller brothers for stronger winds and thus faster foiling! The new boards share the same shape features, except their bottom designs are adjusted with large cut-outs for each size to accommodate the increased pace. They create less drag in occasional touchdowns. Other features are: The shortness minimizes swing weight and tremendously improves top end control. The defined and sharp rails ensure early-take off. The wide tail provides more leverage over the foil for going fast and control. The comfortable deck shape for a relaxed ride, allowing the focus on going faster and faster. Long strap plugs to adapt the stance to the varying lift of different foil sizes and fuselage lengths. The aerodynamic profile of the smaller boards shift the volume to the standing area, gradually thinning-out the front section for minimal air resistance.

FUN RIDE ES

CLASSIC FUNBOARD WITH CENTRE FIN

This shape is designed to let newcomers feel their first planing sensation as early as possible in order get them hooked to the sport instantly! It offers a huge range of use and is the ideal platform for the whole family and friends for their first steps on a windsurf board. On the other hand, its exciting planing potential is a real treat for experienced freeriders.

WINDSURF SUP EVA

WINDSURFING & PADDLING

This board works excellently for both sports and is also enormous fun in both areas. It is an ideal toy for families as it is suitable as a pure beginner's board as well as a board for advanced riders. Above all, it always offers a reason to get on the water - for fun, for a tour, for an adventure, for a workout, or simply all at once.

FUNSTER SPORT EVA

SPORTY DAGGERBOARD RIDE

Combining the stability a beginner needs with enough sportiness to entertain an advanced rider. Contrary to wide body beginner boards like the Funsters, these Funster Sports feature narrower and longer hulls. As soon as you master the basics of windsurfing, they lift up to a glide in light winds instantly offering that traditional 'Funboard feeling'. They are designed for a wide range of use: Play, learn, cruise, glide and have fun in a huge variety of conditions. Once planing they feel fast, agile and alive.

FUNSTER EVA

STABLE BEGINNERS

They provide the superior stability and the easy handling which every beginner needs! After only a few hours everybody will be sailing back and forth. Moreover, they are more than pure beginner boards because they can get you to the planing barrier of a large freeride board. Consequently, they are excellent beginner and family boards, also offering potential for a more advanced rider.

YOUNG GUN FREESTYLE LXT KIDS

THE FUTURE STARTS HERE

Ambitious kids need perfectly tuned equipment to improve their windsurfing skills and to love the sport. This new shape inspires kids to learn and explore all aspects of windsurfing. Kids use small rigs and therefore need boards with compact dimensions and adjusted trim. This means that the mast base and footstraps are close together for responsive performance on the water. Kids grow quickly, but this board can stay with them for a while because the trim can be adjusted over a wide range. The shape is based on our Freestyle Pro model, has all the latest shape details, only adjusted in size. It offers stability, early planing and explosive pop just like the bigger siblings in our range.

YOUNG GUNAIR LE KIDS

INFLATABLE FUN

Simply a great windsurf and paddle board for kids, the Young Gun Air features awesome handling advantages: It can be rolled up and fits into the backpack it comes with - no more need for a roof rack for transport or a big garage for storage. It is also considerably lighter than any hardboard of this size. Kids would even be able to take it to the beach in the backpack on their bike.

MAGICAIR INFLATABLE

AIR-CUSHIONED PLANING

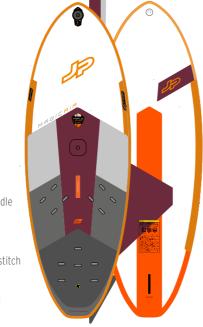

The small inflatable windsurf design: The dimensions of the Magic AIR resemble those of a modern freeride shape and accordingly it offers similar performance and a short-board feeling. It addresses the intermediate to advanced sailor with mainly planing on his mind. Nevertheless, it has more volume than a composite board of the same size, making it easier and more forgiving. It planes so easily considering that it's an inflatable. You'll be surprised how much fun it is to play and plane on this board. The fact that it is slightly softer than composite boards makes it a great gyber as it can give a bit in the turn, almost providing the feeling of a self-adapting rocker line.

VISION RIG SET KIDS

KIDS & STARTER RIG

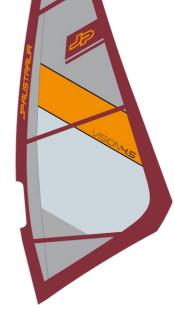

Balancing lightness and control, the number of battens and their position is adjusted individually to each sail size and to the range of use. The smaller sails come with only one full batten to keep the weight low, to catch light winds easily and to deliver power smoothly. The bigger the sail the more battens it has in order to increase control. The biggest ones come with four full and two short battens for a more stable profile and also have a moderately loose leech which allows the sail to perform also when the wind picks up a bit.

The Vision rig is efficient and durable with a full-Dacron® cloth with PVC window which is light, strong, UV resistant and very durable for everyday use. Thus, it qualifies for the toughest test - the use in windsurfing centres! The soft sail material provides great feedback for beginners and is very forgiving at the same time. Kids can easy hold the reduced diameter boom and the 2-colour grip helps to differentiate between port and starboard tack.

The set contains a sail, a reduced diameter boom with uphaul, a 2 piece mast and mast foot. The whole rig comes in a neat bag for easy storage and transport.

X-WINGER

THE COMPACT WING FOILING MACHINE!

The compact size and step tail offer the perfect platform getting instant reaction to pumping. Loading the wing under water and using the lift of the wing for take off. The concave deck shape is equipped with a comfortable pad and additional increased arch and tail kick pad supporting and guiding the foot in the perfect position when riding strapless. The foot-strap options offered, cover everything from V-shape, centered and off-centered positions.

The boards are made in our ultimate PRO technology featuring super strong Innegra rails to ensure the lightest weight and also in IPR, to get the best cost/benefit ratio. The strength of the track boxes is second to none - full deck to bottom PU blocks with multiple reinforcements covering our signature long US tracks for superior leverage to any forces a foil can throw at it.

The X-Winger comes with three single plug footstraps.

NEW SIZE

X-WINGER PRO

THE COMPACT WING FOILING MACHINE

These shapes are very compact with plenty of volume and width. Shallow concaves combined with full beveled rails deliver maximum surface for instant take off and forgiveness during maneuvers. The advanced riders will be able to ride this pure performance-oriented PRO layup. This technology features a high-end finish and lightest weight.

FOIL SLATE IPR

LIGHTNING FAST AND FLYING HIGH

The Foil Slate is a top choice of the riders and the most flexible board in the market at the same time! Werner Gnigler created this great shape for those who wanted to have an all-in-one water sports board. Please note: SUP Foil, SUP Surf Foil, SUP Downwind Foil, Wing Foil, Windsurf Foil, SUP Surf, SUP, Wing Surf and who knows what else can be tried with the Foil Slate!

The Foil Slate is available in our IPR technology which means, the Innegra Parabolic Rail works as a stringer around the whole shape, adding extra stiffness to the board. Using this version of the Foil Slate range you get the best cost/ benefit ratio.

WINGAIR SE INFLATABLE

PURE WING FOILING

Our pure wing foil inflatable. The compact hull with welded seams and JP's superior construction provide a stiff feel when flying on the foil. It is super userfriendly as it features all main advantages of inflatables: comfortable and smooth on your skin and knees, light and small for easy transport and storage. With a foil underneath it is extremely important to have a board, which is capable to stand all pressure and loads while foiling and jumping. With welded seams, JP makes sure that the WingAir is safely processed for being on the water. The G10 Plate with handle is right underneath your feet at the stress point, which concludes in reactiveness and stiffness.

INCLUDED: Comfortable backpack with wheels, double action pump with wing adapter, repair kit, 3x foot strap

SURF PRO

TOP TO BOTTOM PERFECTION

The JP-Australia Surf range is designed for the "no-compromise", top to bottom performance in the proper surf conditions for riders of all sizes. The whole Surf line has unique features: single to double concave flowing into a V tail, pulled in nose and tail, progressive rocker line and thin rails. Its pure performance-oriented layup makes the Surf the best choice for the perfectionist wave riders.

FUSION WOOD

THEY LOVE THE WAVES

The combination of a surfboard outline, subtly curved rocker line and generous volume thinned out on the rails through a step deck is a winning concept that fuses glide and stability with great surfing characteristics. The bottom shapes feature concaves throughout running into a V towards the tail. The V in the tail helps to rail up when going down a wave. The nose create efficient lift and the thinned out rails produce good bite during turns.

LONGBOARD PRO

CLASSIC PERFORMANCE

The Longboard line is full-on surf performance-oriented. All four sizes feature a very subtle step deck and a nicely pulled in tail. The narrow tail, in combination with a V, makes them very loose and responsive. A flat deck curve gives the rider confidence when paddling and the stability needed to cross the breaking waves. The smooth bottom curve provides good glide and, in combination with the increasing tail kick, easy rail to rail transition.

The Longboards have an amazing range of use. They work great for beginners to experts, from first paddle strokes to hanging ten!

OUTBACK AST

RUNNING SILENT

The super stable parallel outline and the sharp displacement bow ensure an effortless and silent glide. Apart from standard fittings like multiple bungee tie downs, FCS nose plugs for GoPro or the JP standard windsurfing option, the Outback comes with cooler tie-down inserts, inserts for the JP Fishing Rack (sold separately) and a very special and unique storage system: the Light Capsule! Discover the new worlds with the amazing night paddling feature of the Outbacks! The Light Capsule has a transparent bottom that lets you put in a flashlight of your choice for an amazing night paddling sensation! You can, of course, use it to store car keys, your favorite drink or even tackle bait. The boards feature the fully padded nose for a comfortable ride of your kid or your dog. Paddle out and kick back - the Outback!

ALLWATER GT BIAX

THE ALLROUND GRAND TOURER

The GT came to life after we developed the Allwater Race boards. When we realized how stable, fast and easy to paddle this shape was we immediately knew that we found the ideal formula for a performance-oriented tourer. The main strong points of this magic shape are; high volume in the nose and the tail area for lift and stability in all conditions, wide square tail and the concave bottom for ultimate in stability and water line efficiency.

ALLWATER RACE PRO

THE MISSING LINK

This is the board you can take to most of the races where you don't know for sure what conditions you can expect: from downwind bumps to flatwater calmness. The rocker line of the Allwater shape fits right in between the Downwind and the Flatwater shape. The concave throughout the standing area maximizes stability and creates a long flat rocker line section. The fin has a forward placed position for maximum maneuverability.

FLATWATER RACE PRO

NO COMPROMISES

The Flatwater Race boards feature a dugout standing area for maximum stability. This has allowed us to go as narrow as 21.5". The volume of the sidewalls will bounce you back in balance even if you are challenged by some chop. The high walls in the front will direct the water from entering and the drain pipes will clear the standing area of any water that might have gotten in. The smooth transition from deep standing area to the thick tail ensures easy movement towards the tail for pivot turning. The narrow nose transforms smoothly into a single concave bottom extending all the way to the tail. This creates a long water line resulting in great linear glide and directional stability.

All the Race PRO boards feature a full PVC sandwich deck and rails for a maximum in durability and light weight.

COMFORT

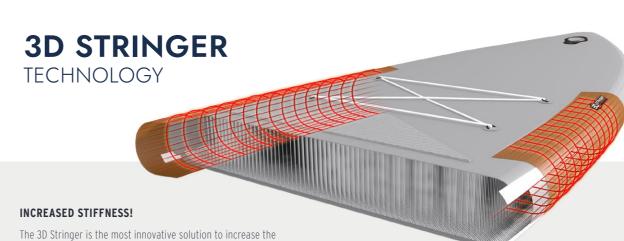

WELDED SEAM TECHNOLOGY

JP-Australia developed the Welded Seam Technology to increase the durability and airtightness of our inflatable boards. The connection between the rail and the drop stitch material is hot-air welded thus creating a very strong mechanical joint that turns these two parts into one. By fusing two different layers together into one part, the welding process makes the board safer and more durable.

THE WELDING PROCESS

- » The first rail layer and the welded tapes are hot-air welded to the drop stitch fabric to ensure a long-lasting mechanical bond.
- **»** This creates a very strong mechanical joint which turns the rail, the tapes and the drop stitch material into one part.

stringer is the most innovative solution to increase the stiffness of an inflatable board. It connects the deck, rail and bottom into one strong and solid U-beam. This has increased the stiffness of the boards up to 30%. Furthermore, the 3D Stringer increased the glued overlap surface in the high-stress standing area, increasing the safety of the boards.

CRUISAIR SE 3DS

CRUISING, TOURING & FITNESS

The CruisAir is the perfect design for your everyday paddle, touring and fitness. The balanced shape outline with a wider tail and narrower outline combines stability with speed. It is an excellent daily use board for different levels of riders.

Available as Superior Edition you will have a triple layer pre-laminated board which creates an unprecendented weight/stiffness/durability ratio over any inflatable SUP ever produced. The 3D Stringer on the sides connects the deck, rail and bottom for an increased stiffness of the board.

INCLUDED: Comfortable backpack with wheels & extra finbag, double action pump, repair kit, 9" fin

SPORTS AIR SE 3DS

FAST & STIFF

The secret of a fast board lies in the narrow outline, pointy nose, great gliding and stiffness. These principles were applied to the SportstAir to make it the fastest i-SUP available.

The SportsAir is built in the Superior Edition with 3D Stringer. The 3D stringer is the most innovative solution to increase the stiffness of an inflatable board. It connects the deck, rail and bottom into one strong and solid U-beam. This has increased the stiffness of the boards up to 30%.

INCLUDED: Comfortable backpack with wheels & extra finbag, double action pump, repair kit, 10" fin

YOUNG GUNAIR SL KIDS

THE SMALLER SUP FOR YOUNG GUN FUN

Same proven outline from the AllroundAir line scaled down to the proper size for the kids. The width of the kids shoulders require a narrower board so that they can maintain a straight line paddling. With a very wide board they will inevitably paddle too wide around and consequently have to change paddle side too often. Comes with a bungee cord in the front.

The SuperLight is the most economical solution for those who are getting into Stand-Up Paddling. More stability for the beginners, more comfort for the families!

INCLUDED: Comfortable backpack, double action pump, repair kit, 9" fin

CARBON PRO

100% Pre-preg Carbon, CNC shaped high density PVC core blade! 100% Pre-preg Carbon shaft! This is the only way to achieve lowest weight, quickest response and ultimate performance. The concave V blades are powerful and super stable, offered in 83 in², 90 in² and the newest 77 in². They feature a generous ABS edge for the protection of your board and the blade. The handles are made of 100% Carbon. The Cut-To-Length Carbon handle is covered with comfortable EVA.

CARBON

100% Pre-preg Carbon CNC shaped high density PVC core blade with a 60% Pre-preg Carbon shaft is a great performance paddle. We kept the "swing weight" low by using the full carbon blade. The 60% Pre-preg Carbon shaft is a better option for those looking for a slightly more forgiving feel at a really low weight predominantly in waves or touring. The concave V blades feature a generous ABS edge for the protection of your board, offered in three sizes: 83 in², 90 in² and the newest 77 in². The handles are made of 100% Carbon. The Cut-To-Length Carbon handle is covered with comfortable EVA.

CARBON GLASS

The Carbon blade in combination with a Pre-preg fiberglass shaft provides very good performance at a great price. The stringer inside the "Y" blade creates stiffness. The matte finish on the shaft provides good grip. Comes with a 100% carbon slotted extension and handle.

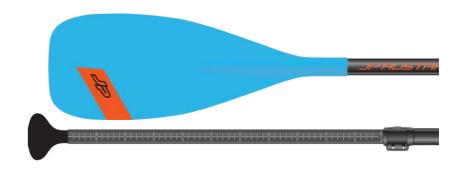

MODEL	SHAFT LENGTH	BLADE	BLADE SIZE in ²	BLADE MATERIAL	SHAFT MATERIAL	CODE	SRP €*
2 -1	160 - 215 cm	Y dihedral blade	83	100% Carbon	Fiberglass	201169	219,00

GLASS

Fiberglass flexes naturally and is therefore easy on your shoulders and back. The stringer inside the "Y" blade creates stiffness while the full fiberglass pressure molded blade is leak proof. The shafts have a horizontally roughened surface for good grip. Comes with a fiberglass/carbon extension and an ABS handle.

SPARE PARTS

MULTI WAVE SLOT BOX

In general, this new style of fin design provides speed combined with control and stunning turning ability. The outline has sufficient rake and area at the tip which results in excellent grip and control in the white water, combined with good acceleration on the way out. The base width is slim for great maneuverability.

SIZE (in cm)	TECHNOLOGY	FIN BOX	CODE	SRP €*

16,5	RTM Carbon	SlotBox	292017	94,00

WAVE SLOT BOX

Based on the concept of the old Polakow Twinser fins: The innovative outline and profile make every board feel much more direct and responsive. The fin alone makes every board more radical in every aspect, no matter if it's used as a single fin or in thruster mode. The fin is faster than traditional wave fins and helps you to get out through the break quicker. The reduced area at the tip makes the fins super easy to control.

22	RTM Carbon	SlotBox	292018	124,00

SIDE WAVE MINI TUTTLE BOX

Two supplementary fins positioned on the rail help to track and guide with their main purpose being to provide additional grip in extreme turns. When when railing the board up hard, the tail starts to come out of the water, for example during top turns (which then become lip slides) and also in extreme bottom turns. In these extreme situations center or twin-fins may come out of the water but one of the Side Fins will still grip! These Side Fins feature a balanced outline and a straight rake curve. They feel more direct and allow more radical turns. Important: The side fins and the covers are made for Mini Tuttle Boxes (MT).

NEW SIZE

FREESTYLE WAVE POWER BOX

The fin range based on the shape of the Wave and Polakow Twinser line. This new-style outline and profile make all maneuver oriented boards feel much more direct and responsive resulting in dramatically improved maneuverability. It is faster than traditional, dolphin style FSW fins. It helps get planing earlier and accelerates much quicker. The perfect fin concept for the FSW board range.

FREESTYLE POWER BOX

A new, short, small "new School" freestyle fin: The new freestyle fins can absorb a bit of extra power from the rider without spinout and thus are faster. The slightly smaller tip with less resistance speeds up your rotation in sliding moves. Like every short fin, they make the boards feel very responsive and provide great maneuverability.

RIDE POWER BOX & TUTTLE BOX

The transfer of the WAVE fin concept into the FREESTYLE WAVE line was so successful that we took it to the freeride segment. The new outline in combination with the thinner profile results in less drag and consequently more speed and better top end control. The new fins develop an enormous amount of lift and push the rider onto the plane instantly. These fins make the boards feel more responsive and improve their maneuverability. Every advanced freerider can tune up his boards with these new fins, making them faster and more maneuverable in all conditions!

SUPER LIGHTWIND CARBON

DEEP TUTTLE BOX

This design is positioned in between a Slalom and Formula fin. Wide base and parallel tip for maximum efficiency in light wind. Top speed is guaranteed because of the thin profile which only the molded technology allows us to use. Special layup makes the fin perform in a way that means we can take advantage of the foiling effect (known form formula fins) and controlled twist for comfortable high speed runs. This fin is the ideal tool for the SLW boards.

56	Carbon	Deep Tuttle Box	242060	229,00
60	Carbon	Deep Tuttle Box	242060	239,00

SPEED TUTTLE BOX

Designed for top speed on a reach. The profile thickness and the profile length (cord length) are kept at their minimum, resulting in least drag and optimum downwind speed. With good twist they provide excellent control at top speed. The profile with the wide point slightly further back produces less drag and creates even lift throughout the whole wind range. The constant twist and flex makes the fin very predictable and provides amazing control and top speed without lifting the nose out of

26	G10 CNC	Tuttle Box	242061	149,00
28	G10 CNC	Tuttle Box	242061	159,00

SLALOM TUTTLE BOX

Designed for top speed on all tracks. The profile thickness has been reduced further and the cord length shortened, resulting in less resistance and better performance. The fins reach high speeds and provide more control when overpowered. The widest point quite far back on the profile produces little resistance and creates even lift throughout the whole wind range. The constant twist and flex make the fin predictable, providing amazing control and top speed without lifting the nose off the water.

WEED (SEAWEED FINS)

SLOT & POWER & TUTTLE BOX

The right rake angle is the key to this design: Seaweed, plastic bags etc. simply slip past. Additionally, the rake angle ensures smooth entry into turns. The material, the slim profile and the efficient shape make them very fast designs. Their areas are quite large, offering enough lift for easy planing. The new Weed Slalom fins have an even slimmer profile to reduce their resistance and increase their performance. Also note the enormous length and area of these fins - there are not many weed fins that big available on the market!
